

MidNite Solar's Grid Tie/Battery Backup AC Coupled Flow Diagram - Grid Up

An AC coupled system will sell the PV power to the grid under normal conditions. When there is a power outage the battery based inverter will open its relay and disconnect from the grid. It will produce AC power for the critical loads at this time. The grid tie inverter will connect to the battery based inverter to run the loads and charge the batteries from the Solar Panels. When the batteries get full there is a relay inside the AC coupled battery based inverter system that disconnects the grid tie inverter to prevent the batteries from being over charged.
