

MidNite Solar

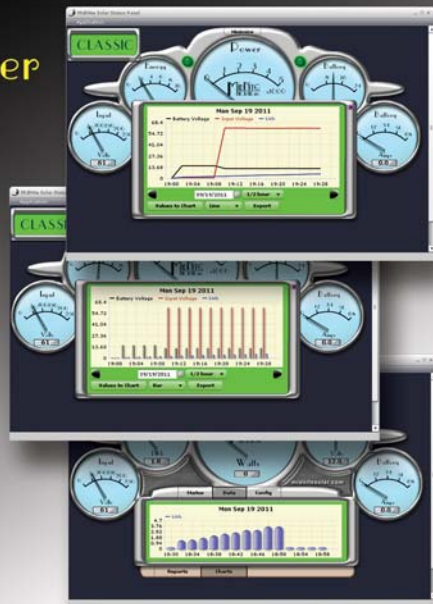

Classic MPPT Charge Controller

Data Logging & Reporting Graphs

MidNite Solar's Classic Data Logging and Reporting Graphs have raised the bar for MPPT charge controllers. With new online software you monitor your alternative energy system anywhere you have an Internet connection. The graphical display on the Classic has 96 data points which allows you to view 96 minutes of data or zoom out to 96 days. The Classic retains 380 days of scrollable data that can be viewed either with text or in graph form.

You can easily display the highest power per day, time in float per day, maximum input and output voltage per day or kwh per day. Instantaneously the minute, power, voltage in & out, amps, kwh and temperature readings can be seen.

For a detailed description of the new online software and the Classic graphical interface, go to www.midnitesolar.com/classic/datalog.php
