

MidNite SOLAR'S Classic Lite

With HyperVOC Technology

All the power of the
standard Classic for \$150 less*

The Classic Lite, there is nothing "Lite" about it!

When we introduced the Classic in 2010, we brought the MPPT charge controller from the dark ages into modern times! Now, with the Classic Lite, we are proud to offer the same incredible power to the market at a substantially lower price. The Classic Lite, like the Classic, can charge from 12 to 120 volt batteries with output up to 96 amps. Why would you choose a lesser controller for your system? Get the full potential from your Solar, Wind or Hydro with the Classic Lite. See our website for a full description of the Lite's features.

- \$150 less than the Standard Classic models*
- Simple DIP switch programming
- LEDs for Bulk, Absorb, Float, Equalize
- Selectable manual or auto Equalize
