

MIDNITE SOLAR

The Clipper & Classic

Clipper

The MidNite Clipper was designed to work in conjunction with the Classic MPPT Controller to give you safe reliable control of your wind turbine while also giving you true three stage charging of your batteries. The combination of the Clipper and the Classic has been proven to increase daily harvest up to 250% as well as peak power by 300% on some turbines.

- Three stage charging
- Reduces wear & tear on turbine
- Reduces noise from turbine controllable noise level

Classic MPPT Charge Controller

The Classic substantially increases the flexibility, features and range currently found on MPPT controllers. It is also now the standard wind controller supplied by many US, Canadian and African wind turbine companies.

With the Classic models rated from 63 to 96 Amps, why would you want any other controller?

- 150, 200 and 250V operating voltages.
- 12-72V battery charging standard with models up to 120V battery bank
- Built in DC-GFP and Arc Fault Protection
- Solar, wind and hydro MPPT modes
- Exclusive hyperVOC extends VOC limits
- Wizard walks you through complete setup
- Ethernet, USB and RS232
- Remote and local displays possible
- 20 megs of data logging
- ETL Listed for the US & Canada
