

MidNite Solar's New

Disconnecting Combiners

Coming in late summer 2011

Midnite Solar is pleased to announce a new line of disconnecting PV array combiners. These lines are focused on safety, smaller size, lower profile, ease of installation and updated code requirements. Pricing is set to keep overall PV system costs low! Available from 4 to 24 strings in Nema 3R and 4X aluminum.

Each disconnecting combiner is capable of interfacing with up to two of our Emergency Disconnect Switches. Firefighters love this option.
